

## For Inflatable Boats

The variety of design and size of small inflatables makes for a challenge when picking the "right" dolly for your boat. Dynamic offers several types of dollies that help satisfy the wide range of inflatables. Two wheel sizes, Standard or Large, allow users to choose the tire that works for the terrain they encounter (Large Wheels Above). Delrin® ball bearings make for an effortless roll. Dynamic Dollies are designed to last in the harshest environments with little maintenance.

Type 9 Type 10

**Type 1 Dolly** — This single tongue, single axle dolly is ideal for hard bottom or high pressure keels. Our rugged "V-Fitting" cradles the keel of the boat. Eyelets on the bow and side tubes provide a convenient tie down point.

**Type 5 Dolly** — This double tongue, single axle dolly works well for larger hard bottom boats. The boat's keel rests on a "keel tube" that links the dolly tongues together. The keel tube is covered in a braided hose.

**Type 10 Dolly** — This sling-less dolly works well on smaller inflatables, especially those with a flat, soft bottom or those with a high pressure keel. The cross bars that the boat rests on are covered in a durable, non-marking, vinyl rub rail.
