

Electric RetroFit Kit for Bennett Trim Tabs

**Tired of slow-response hydraulic trim tab systems?
Tired of replacing unreliable hydraulic pump units?**

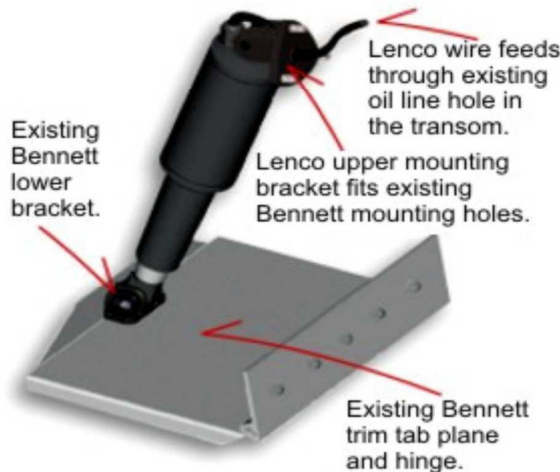

Now you don't have to buy a new boat or an entire new set of trim tabs to get all of the advantages of the latest in trim tab technology.

Lenco's high performance, instant response and maintenance-free actuators are now available to retrofit any boat equipped with the standard length Bennett hydraulic cylinders (A1101A - 4 ring version).

This simple Bennett RetroFit Kit includes everything necessary to upgrade your current boat without any drilling or filling. You simply discard the hydraulic pump unit and the two Bennett cylinders. Install the two Lenco electric actuators (6' leads) with our new style upper mounting brackets on your existing Bennett trim planes. Connect our actuator wiring to the existing harness (jumper wires are included for attaching to current Bennett switch). Complete installation instructions are included.

IT'S THAT SIMPLE!

Want to upgrade from your Bennett switch? See page 14 & 15 for the available Lenco Switch Kits (15069-001, 15070-001, & 10222-211D).

We make the best boats better!
