

Boat Control Panel

Max Power's new Boat Control Panel simplifies the combined use of a bow and stern thruster.

Replacing the need for twin joysticks, the Boat Panel allows full control of both the bow and stern thruster via one easy to use manipulator.

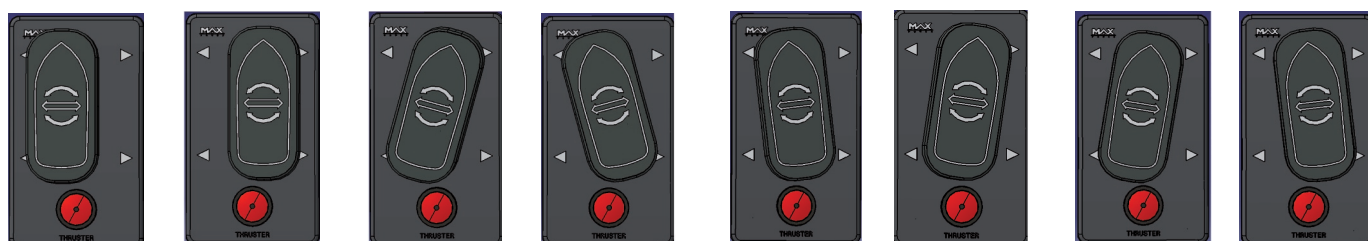

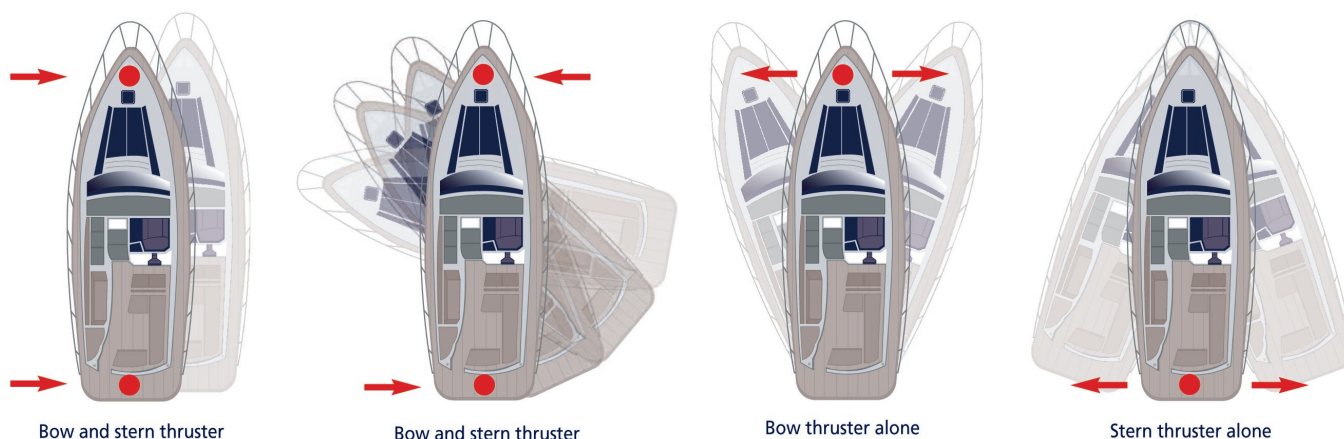

Stepping the boat sideways and turning 360° on the spot become smooth and simple operations, and each thruster can still be used independently.

The Boat Control Panel integrates all of the unique safety and technical features of the Max Power control panel range once again ensuring peace of mind onboard.

Product Ref.: 318234

Total Manoeuvring Control

Max Power's thruster control systems include a variety of **advanced safety features**.

- Childproof activation
- Automatic shutdown after 30 minutes of inactivity
- Visible and audible motor overheat warning
- Motor overheat shutdown after prior warning
- Standard automatic battery isolator control
- Time delay switch between port and starboard thrust
- Software protection against short circuits
