Pro Strap Kicker Tie Down

The Panther Pro-Strap provides hands-free, heavy duty retention of your kicker motor when using Models 0035, 0350 or 0435.

(These units have predrilled attachment holes for the clevis pin).

As the engine is tilted, the strap tightens and secures the motor from bouncing in rough water conditions. As the motor is lowered, the two inch diving belt strap stays secured and tucks to the side.

Adjustable buckles and stainless clevis are included.
