VOLUME 2

WARNING

- READ THIS MANUAL CAREFULLY BEFORE USING YOUR BOAT.
- THIS OWNER'S MANUAL CONSISTS OF 2 VOLUMES THAT SHOULD BE KEPT TOGETHER.

NOTE

- The Owner's Manual is divided into 2 volumes:
- Volume 1 gives general rules of the road and boat use recommendations, which should be followed onboard during navigation.
- Volume 2 gives technical specifications and assembly instructions for the boat and its equipment.

PROCEDURE FOR PUTTING THE BOAT INTO USE

To identify the boat, turn to the APPENDIX:

- technical specifications (page A-2, A-3),
- description (page A-4, A-5).

 ATTENTION	BOAT ASSEMBLY PROCEEDS IN A CERTAIN ORDER THAT WE RECOMMEND YOU FOLLOW CAREFULLY. REFER TO THE PAGES INDICATED BELOW FOR THE STEP BY STEP INSTRUCTIONS
---	---

Procedure for putting the boat into use and storage	Page	Section
1. Inventory upon opening	2	INVENTORY
2. Turn the valves to the inflation position	3	INFLATION SYSTEM
3. Lightly inflate the buoyancy tube	6	BOAT INFLATION
4. Assemble the floorboards and stringers	5	BOAT ASSEMBLY
5. Inflate the buoyancy tube	6	BOAT INFLATION
6. Inflate the keel and the lower tubes	6	BOAT INFLATION
7. Adjust the pressures	7 - 8	AIR PRESSURE
8. Store the boat	9 - 10	DEFLATION/FOLDING

INVENTORY UPON OPENING

 WARNING	DO NOT USE CUTTING INSTRUMENTS SUCH AS KNIVES OR CUTTERS TO OPEN CARDBOARD BOXES

2. Stringer	2	2	4
3. Paddles	2	2	2

You can equip your boat with many optional accessories (wheels, ladder, lifting rings, etc...). Ask your agent for advice.

THE INFLATION SYSTEM

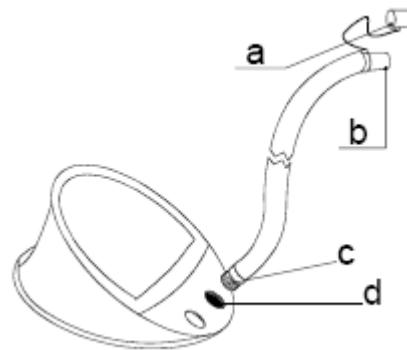

The inflation system is composed of:

INFLATION PUMP

- | | |
|---------------|----------------|
| (a) adaptater | (b) hose tip |
| (c) hose base | (d) air outlet |

To inflate :

- Place the hose tip in the air outlet,
- To inflate correctly, the pump should be flat on the ground,
- The boat will inflate rapidly if pumping is done at a regular calm rhythm,
- Use the adapter that corresponds to the diameter of the hose tip valve

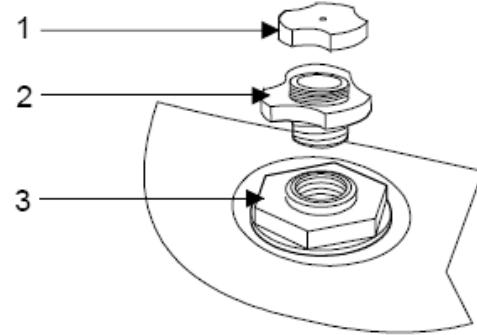

STANDARD VALVE

- (1) cap (2) valve (3) base

To activate the valve in the inflation position :

- Unscrew the cap,
- Screw the valve into its base (tighten fully without damaging the thread), keep the cap at hand.

To close the valve after inflation :

- Screw on the cap.

To deflate the buoyancy tube :

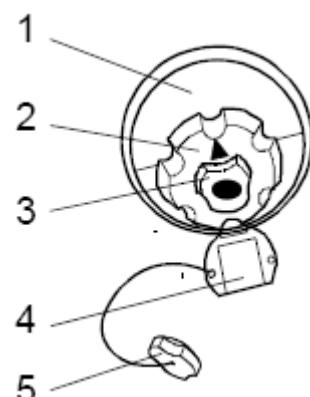

- Unscrew the valve from its base.

INTERCOMMUNICATION VALVE (I/C VALVE)

- | | |
|------------------|---------------|
| (1) valve base | (2) I/C valve |
| (3) valve insert | (4) cap cover |
| (5) cap | |

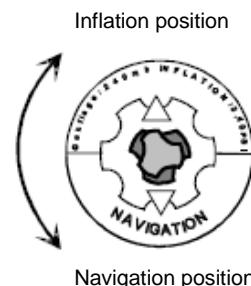

To activate the valves in the inflation position :

- Put the I/C valve in the « inflation » zone (red),
- Unscrew the cap,
- Screw the valve insert onto the base (energically, but don't damage the thread)

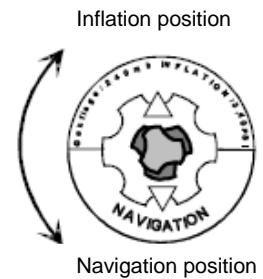

To close the valves after inflation :

- Put the I/C valve in the « navigation » zone (green),
- Screw the cap.

To deflate the buoyancy tube :

- Put the I/C valve in the « inflation » zone (red),
- Take the valve insert, with its cap, off the base.

BOAT ASSEMBLY

Illustrations in APPENDIX page A-8

Assemble the boat on a smooth clean surface.

If the boat is stored in a temperature inferior to 32°F (0°C), before unfolding, let it warm up for 12 hours at room temperature, 72°F (about 20°C).

FLOORBOARD ASSEMBLY

- Put potato starch at the corner reinforcements (c) (strips between the buoyancy and the bottom), to make it easier to place the floorboard elements.
- ATTENTION: NEVER USE TALCUM POWDER**
- Inspect each element to understand how it will be mounted:
 - The floorboard (Fig. 1) is composed of 4 or 5 elements (alu) and 2 bow floorboard sections (wood).
 - The order of assembly of each element is indicated on a label in the upper right hand corner.
 - The bow floorboard sections have an upside and a down side. The upside is identifiable by a label with the sun (9). If the label is lost, use the lines on the aluminum junction profiles to guide you, they are apparent when assembling.
- Lightly inflate the buoyancy tube (this helps the elements to take their place).
- Place the bow floorboard (1)(Fig. 4) into the corner reinforcement (c).
- Place the aft element (7) against the transom (6).
- Fit in the remaining floorboards elements (1) and (2).
- Place elements (4) and (5) in a pointed “roof” position.
- Make sure the elements are lined up straight.
- Flatten the “point” by getting into the boat and pulling UP on the grab lines (this prevents the fabric from getting pinched (Fig. 2).
- Make sure the floorboard (a) is correctly positioned in the corner reinforcement (c).
- Position the stringers as indicated below.

PLACING THE STRINGERS

The stringers (6) (Fig. 3) are essential to the seaworthiness of the boat. They lock in the floorboards and assure the rigidity of the entire structure.

- After having flattened out the floorboard to position the stringers (6) more easily, when the ground is not level, slide the paddles under the boat bottom lengthwise, at about 20 cm (7.8 in.) on either side of the center. (Fig. 3).

Never place paddles on the bottom of the boat before having flattened out the floorboard. It could damage them.

- Place the stringers (6) along the outside of the floorboard, the indicators (9) always on the top (Fig.3).
- Make sure the stringers are correctly positioned between the stoppers on the floorboard elements (Fig. 1).
- The entire thickness of the floorboard must enter the stringer cavity. To do this, pivot the stringer back and forth to adjust. Do the same to make the stringers fit into the space in the transom corner reinforcement (Fig. 3 and 4).

When the boat is inflated, the interlocking construction of the floorboard facilitates final positioning of the stringers.

BOAT INFLATION

Illustrations in APPENDIX page A-9

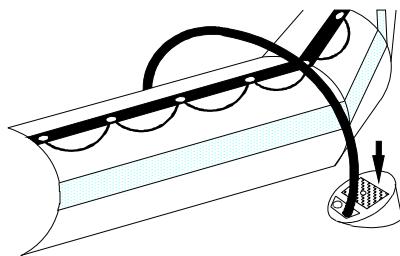

DO NOT USE AN AIR COMPRESSOR OR AN AIR CYLINDER.

NOTE

Do not inflate boats stacked one over the other.

- Insure that all valves are in the inflation position.
- Attach the pump hose tip to the valve on the buoyancy.

INFLATE THE BUOYANCY TUBE

Set in the floorboard and the stringers before to inflate the buoyancy tube.

- Inflate the buoyancy tube until green area of the pressure indicator.
- Screw the cap after inflation.
- Close the valves (navigation position) (See APPENDIX page A-9).

INFLATE THE KEEL

- Inflate the keel after having adjusted the buoyancy tube pressure.
- Close the valve after inflation (See APPENDIX page A-4).

NOTE

A slight loss of air is normal before the cap is screwed on. Only the cap assures total air tightness.

AIR PRESSURE

NOTE

Before to check air pressure, put the I/C valve in the "INFLATION ZONE" (red).

Operating pressure for the buoyancy tube and the keel is 240mb/3,4 PSI (in the middle of the green zone on the pressure indicator).

We recommend the use of a manometer to check the inflation pressure.

Without a pressure gauge, stop inflating when the buoyancy tube is so firm that it is impossible to bend back the aft cones ends by hand.

It is important to foresee pressure changes: Check and adjust the pressure in the compartments (by inflating or deflating) when temperature changes occur (especially in tropical areas where temperature variations are pronounced between morning and night). Be sure that the pressure doesn't vary from the recommended zone (220 to 270 mbars).

The temperature of surrounding air and water will proportionately influence the level of internal pressure in the buoyancy tube.

Surrounding temperature	Internal pressure in buoyancy
+1°C	+4 mb / 0.06 PSI
-1°C	-4 mb / 0.06 PSI

RISK OF PRESSURE LOSS

Example: Your boat is on the beach in the sun, temperature 50°C (122°F), at the recommend pressure (240 mb/3.4 PSI). When you launch the boat into 20°C (68°F) water, the temperature and the internal pressure in the compartments will both decrease (as much as 120mb). Consequently the boat must be topped up to recuperate the loss due to the temperature difference (between the surrounding air and the water). Also, it's normal to discover a pressure loss at the end of the day when outside temperatures decrease.

WHEN A BOAT IS UNDER-INFLATED, IT LACKS RIGIDITY IN NAVIGATION AND WILL PERFORM POORLY. IT ALSO TENDS TO AGE PREMATURELY.

RISK OF OVER PRESSURE

Example: The boat is inflated to the recommended pressure (240mb/3.4PSI) at the beginning or end of the day (low outdoor temperature =10°C/50°F). Later in the day, the boat is exposed to full sunlight (50°C/122°F) either on the beach or on a yacht deck. The temperature inside the compartments will increase (up to 70°C/158°F) especially with a dark colored buoyancy tube, causing the pressure to double (480 mb). Deflating is necessary to bring it back to recommended pressure.

IF THE BOAT IS OVER INFLATED, THE EXCESSIVE PRESSURE EXERTED ON THE INFLATABLE STRUCTURE CAN RUPTURE THE SEAMS.

AIR PRESSURE

IN CASE OF UNDER PRESSURE

Do some topping up :

The standard valve:

- take off the cap,
- attach the pump to the valve,
- inflate to adjust the pressure,
- screw on the cap.

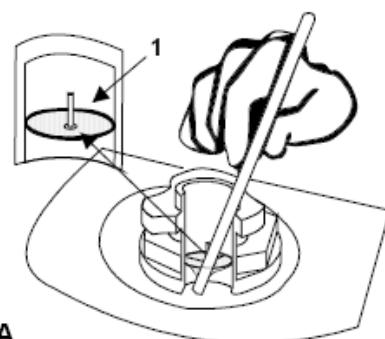

I/C Valve:

- take off the cap,
- attach the pump to the valve,
- put all the I/C valves in the “inflation” position (red),
- inflate to adjust the pressure,
- put all the I/C valves in the “navigation” position (green),
- screw on the cap.

IN CASE OF OVERPRESSURE

Standard valve (A):

- take off the cap,
- let some air escape by lightly pushing down on the diaphragm(1) with a blunt instrument (like a pen),
ATTENTION: BE SURE THE DIAPHRAGM DOESN'T FOLD OVER,
- screw on the cap.

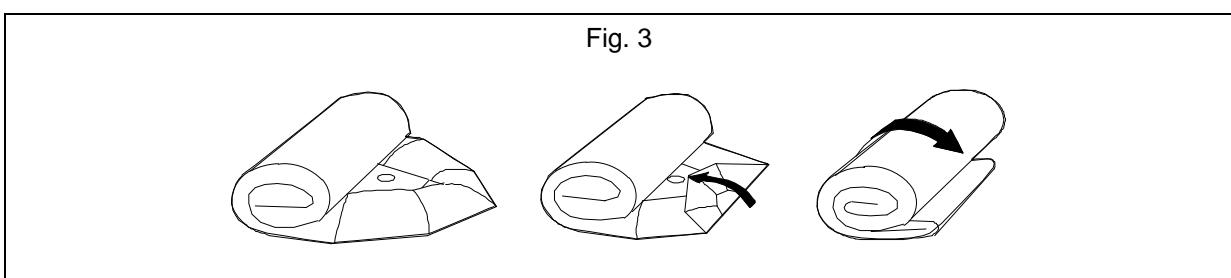

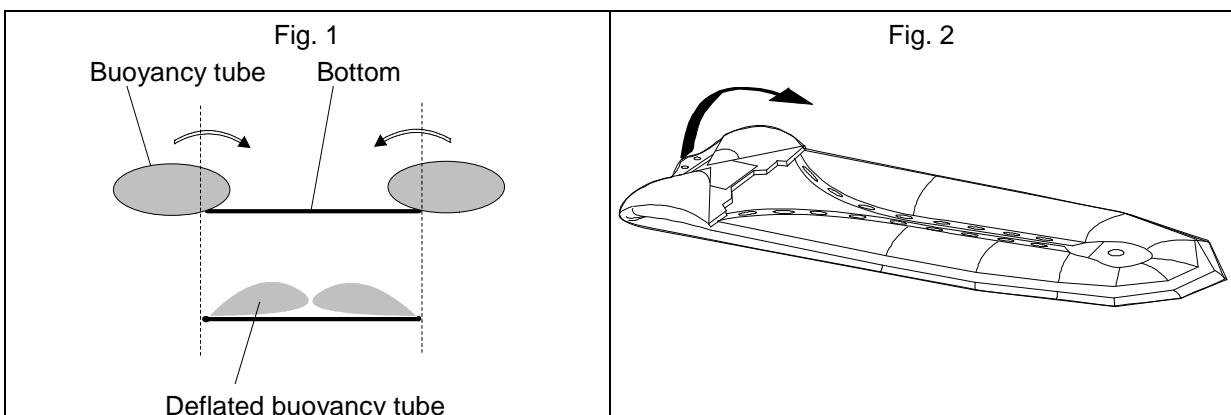

I/C Valve:

- take off the cap,
- put all the I/C valves in the “inflation” position (red),
- let some air escape by lightly pushing down on the diaphragm with a blunt instrument (like a pen),
ATTENTION: BE SURE THE DIAPHRAGM DOESN'T FOLD OVER,
- put all the I/C valves in the “navigation” position (green),
- screw on the cap.

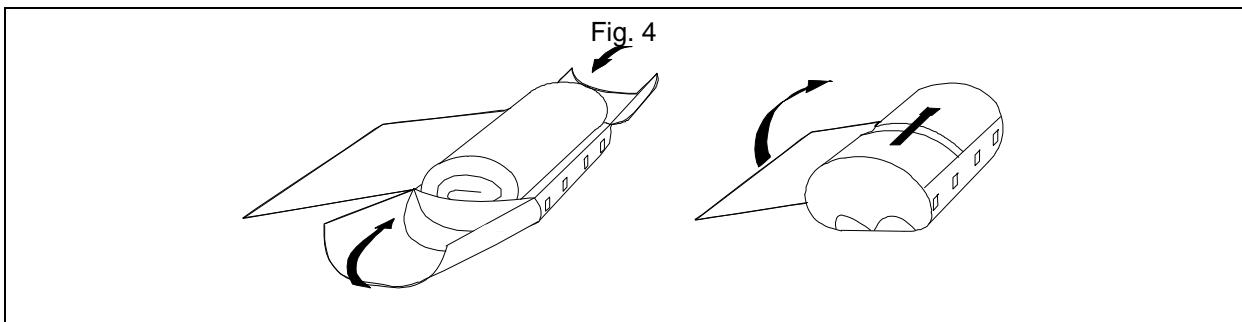

DEFLATION/FOLDING OF THE BOAT

- Take off all equipment.
- Deflate the boat:
 - put the valves in the inflation position (red),
 - take the valve inserts off the bases.
- Take off the floorboard, execute the assembly procedure in reverse.
- Put the valve inserts back on the bases.
- Take off the self bailer.
- Rinse the boat with fresh water:
 - Inflate partially the boat to facilitate cleaning and drying operations.
 - Remove any sand and clean the deck and tube with a brush and washing powder.
 - Remove all water and dry the boat completely before storage.
- Fold both sides of the buoyancy tube towards the interior (Fig. 1), bring up the cones against the transom (Fig. 2), and then fold the boat around the transom (Fig. 3).

Start again if you notice that some air remains in the compartments.

- Place the boat in the bags using the following procedure (Fig. 4):
 - In **one bag** the floorboard elements and the stringers, in **the other** the buoyancy tube.
 - Fold over the top and buckle the front cords.
 - Close tightly by pulling the lateral tightening cords, making sure no accessories are sticking out.

INFLATABLE BOAT STORAGE AFTER USE

To store the boat inflated:

- open the self bailers.
 - Rinse the boat with fresh water in order to remove any sand, seaweed, etc.
- Remove all water; make sure that no water is left in the boat before storage.
